

PROBLEM STATEMENT THEME

Productivity Reimagined

- Organizations lack visibility into productivity leakage.
- Employees spend too much time on repetitive work.

THE COST TO THE BUSINESS

Business Problem

Cost

Every release cycle, the business pays for the same manual verification work to happen again — effort that adds no new value the second time.

Risk

Without proof of what was actually checked, gaps in the application go live undetected — until a customer or an audit finds them first.

Delay

Confirming coverage can't scale with release frequency, so releases either slow down or ship with unverified confidence.

Trust

No single report exists that leadership can open and trust — coverage claims are anecdotal, not evidence-based.

The result: recurring cost, hidden risk, and no evidence to show for it.

HOW THE SOLUTION WORKS

How does it work?

App pages get exercised → CoverageEngine plugin watches → Automation scripts sync in → One coverage & execution report

- 1 The plugin loads automatically the moment testing starts — no setup required by the tester
- 2 It quietly tracks every page, section and action touched during the test run
- 3 Reusable automation scripts run the same checks on their own, on any application, with no manual clicking
- 4 Once testing ends, the two feeds combine into one clear picture: what passed, what failed, what was never touched
- 5 **A single report is generated automatically — ready to open and share, no manual assembly**

Works the same way on any application — plug it in, point it at the app, done

THE PAYOFF

Business Benefits

↓ [X]%

Manual verification time

Placeholder — replace with your team's measured reduction once tracked.

100%

Of pages verified, every run

No page skipped or forgotten — coverage is confirmed automatically, not assumed.

[X] hrs

Freed up per release cycle

Placeholder — fill in with your team's actual hours saved per cycle.

This is a plugin, not a paid AI model or agent. It runs inside tools the team already uses — no subscription, no per-use charge, no ongoing cost to keep it running.

Time saved isn't headcount cut — it's time reinvested: the same team can extend coverage to more applications instead of re-checking the ones already done.

Figures in brackets are placeholders — swap in your team's measured numbers before presenting.

Thank You
